

Subject: 10x less expensive energy and a baby elephant

[Full Name],

A photon checks into a hotel.

The front desk attendant asks, "May we help with your luggage?".

The photon replies, "Oh no, I'm traveling light."

I write to share information you will find important in your capacity as [[Title] at [Organization] and ]a legal permanent resident of Earth.

I have released detailed construction instructions for four self-contained physics powered motors and generators, each expected to provide clean electricity as well as propulsion at a cost of more than ten times less than any other current or proposed system, and are thus expected to make irrelevant all other current and proposed forms of energy production and storage as well as non-space propulsion, where only one of the inventions has to work to immediately resolve urgent global problems, and ultimately have a cost based monopoly on the world's largest market by revenue. This work requires your immediate support, as explained and specifically requested after the descriptions of the inventions.

Among other credentials, I am a certified expert software engineer by each Microsoft (C#, T-SQL) and Oracle (Java, PL/SQL), have written software to scale a startup hedge fund from zero to billions in assets under management in one year, as well as software used to protect U.S military networks, and published three books, the second implemented by world leaders and endorsed by Kings, a Prime Minister, and a Second Lady, with a Prime Minister writing the book is "a pointing of horizons and goals to which we must be aware... the quest for harmony and a blend of attitudes that could reach the heights of the global and total dignity of human beings."

I have already had a generous stream of aggressively deficient minds attack the validity of the inventions without being able to cite a specific error in any of the detailed technical specifications or demonstrating relevant expertise. Therefore, to directly address skeptics of the inventions, units are expected to operate with a thirty year lifespan, and are not free to produce, thus do not provide for perpetual motion or free energy. The inventions, as exhaustively detailed with validating calculations in a freely available electronic book, operate in a manner entirely consistent with the laws of physics, including the first law of thermodynamics covering the conservation of energy, and may be fully logically validated by anyone of above average intelligence who commits adequate effort to studying the full technical disclosures, where I expect every reason anyone is certain they won't work has already been identified and resolved. While production of fully functional prototypes of the inventions is pending funding, I have worked on my inventions and related tasks almost every waking minute for three years, along with incurring what probably amounts to around a

hundred thousand dollars in direct expenditures, and have given up cash compensation for three peak earning years, making these sacrifices because I am as certain as I am that I exist that all four inventions function as described.

The inventions, as illustrated and accompanied by overly simplified explanations below, are protected by means detailed in the accompanying book including already filed international patents, but before reviewing the inventions, first an important question for you: why did the baby elephant have to buy luggage for vacation? (you have to read through to the end or you may miss the answer to this cliffhanger [First Name]).

#### Bannon Maher Magnetic Repulsion Generator

[ Image ]

Magnets are arranged and insulated in two complimentary structures designed to direct repellent magnetic fields to provide continuous rotation to rotate the axle of a generator to produce electricity. Enabling breakthroughs: (1) the design of the structures and corresponding arrangement of the magnets (2) operating in conjunction with magnetic field directing materials.

#### Bannon Maher Leverage Generator

[ Image ]

Force provided by hydraulics is passed through gears to increase speed to rotate the axle of a generator to produce electricity. Hydraulics may be operated by hydraulics for increased efficiency, bringing expected electricity consumption to less than 1% of production. Enabling breakthroughs: (1) capturing the efficiency gains provided by hydraulic leverage (2) capturing further efficiency gains provided by layered leverage.

#### Bannon Maher Gravity Generator

[ Image ]

Captures the energy differential when linear force provided by hydraulics is used to elevate water, while compounding force is provided by gravity during water drop, to provide rotational force to a turbine to rotate the axle of a generator to produce electricity, where hand operable hydraulics may be operated by hydraulics enabling, for example, 30 pounds of continuous input force to elevate a reservoir of water weighing more than a billion pounds over a brief period of time, ultimately consuming less than 1% of electricity produced. Enabling breakthroughs: (1) capturing the energy differential between the linear force of hydraulics and the compounding force of gravity (2) capturing the efficiency gains provided by hydraulic leverage (3) capturing further efficiency gains provided by layered leverage.

## Bannon Maher Buoyancy Generator

[ Image ]

The buoyancy of water raises a buoyant weighted object without using energy, the object is then pushed into a chain connected compartment, providing force as it drops to rotate the axle of a generator to produce electricity, and then the object reenters the bottom of the water container to repeat. Enabling breakthroughs: (1) using gravity to drop a weight and buoyancy to raise a weight, while (2) using the force of gravity on the buoyant weight, entering the door of the bottom compartment at an angle, to push water from a partitioned compartment through a tube back to the top of the tank, and locking the entry door and unsealing the bottom partition to repeat the cycle.

"It all makes sense!"

[ baby facial expression picture ]

The majority of my personal profits from the sale and licensing of the inventions will ultimately go to causes that support the well being of humanity, as explained in the freely available accompanying book.

America, at its best, has been a broker of peace, a ladder of opportunity, a reminder that in time freedom and justice prevail, and in the dark of night a lighthouse of hope. I have taken the unusual step of domiciling both the corporate and intellectual property entities in the United States, so the taxes on all revenues will be paid here, bringing two potentially unprecedented sources of corporate tax revenue to the United States Treasury – but that will soon be permanently lost if I don't very quickly obtain the up to \$4 million required to pay the international patent fees due in the coming months, otherwise tragically instead of America collecting such funds from international licensing, only Americans will be paying me licensing fees, since I have already personally paid the patent fees that have been assessed domestically, and the loss of funds will logically be attributed by the public and history to those people aware of this work and in a position to provide support but who failed to do so. Leading opponents to date, who I continue to invite to instead immediately support this work critical to us all, have been Donald Trump, who incorrectly believes he and I have competing interests, and Bill Gates, who has major investments in nuclear energy.

Every moment I am delayed in producing and distributing my inventions creates potentially irreversible damage to the planet, along with countless lives lost, and conflicts fueled, from poverty, pollution, unaffordable transport, water shortages, and crop and livestock deaths, so your immediate overwhelming support is critical to humanity.

I am currently looking for the following, and the previously cited factors require that we move as quickly as possible:

(1) **Investors:** one or more eligible investors – please see the relevant SEC filing, prepared and filed by a third party compliance team that included a lawyer and accountant, containing full disclosure of risks, along with eligibility requirements including accredited investor status, and participation instructions at <http://www.bannonmaher.com/>. No communication is or may be considered a solicitation to sell a security to any person in any jurisdiction where such offer, solicitation, purchase or sale is not allowed.

(2) **Grants:** immediate unrestricted funding allows for this work to proceed in a manner that will be most beneficial to the world. The federal Department of Energy, and state departments of energy, have so far failed in fulfilling the intent of their mandates, not yet providing me the unrestricted no strings attached funding immediately required for this work that would allow for securing and maximizing this revenue for America.

(3) **Orders:** to support production of units – the orders are non-refundable, even if the funds provided aren't able to produce units that function as expected. The order form is available at <http://www.bannonmaher.com/>.

(4) **Patent lawyers:** one or more patent claim construction prosecution experts with a relevant technical background who can help me as I continue to prosecute the already filed international patents.

(5) **Journalists:** positive coverage to serve the public interest by immediately raising awareness of the immense value of and urgent need for my inventions.

(6) **Endorsements:** I would be honored, and it would provide exceptionally valuable support through external validation, to have any credentialed physicist and or engineer provide a signed letter of endorsement validating the positive net electrical output of each of the inventions as disclosed in their full technical specifications. I want the assessments to be both completely honest and completely informed, so if you think you've found any error in any one of the inventions, as disclosed in the detailed technical specifications, I'd appreciate the opportunity to provide clarification.

(7) **Manufacturing, sales, and fundraising support:** people who can accelerate progress.

(8) **Product developers and manufacturers:** if you are the first to mail me a fully functional unit of any invention, as derived from the detailed technical specifications, I will at an absolute minimum be happy to repay you your normal production fee when doing so becomes reasonably possible, and will likely use you as my contract manufacturer and or manufacturing development organization, where inventions in descending order of importance of production are: magnetic repulsion generator, leverage generator, buoyancy generator, gravity generator.

(9) **Licensees:** the motors, when not implemented or sold to be implemented in conjunction with producing electricity, may now be available for license from the intellectual property holding company, in exchange for pre-payment of licensing fees, providing early adopters an unprecedented advantage in the market. Simply ask your engineering team to validate the inventions, then ask me for the licensing contract. I may however prohibit all licensing if I am unable to raise the funds required to pay the very soon due international patent fees.

If you can meaningfully support achieving the stated objectives, please immediately email me at [bannonmaher@bannonmaher.com](mailto:bannonmaher@bannonmaher.com).

[First Name], will you help me save the world?

Jonathan Bannon Maher  
Founder, Chair, C.E.O.  
Bannon Maher Corporation

P.S. The answer to question above about the baby elephant? He only had a little trunk.

P.P.S. Additional inventions detailed in the book disclosing specifications of the motors and generators, include a cost and yield optimized agricultural production system, structures for automated housing construction, software providing demographic targeting of advertisements to unregistered viewers, software easing computer application development, software providing audio component separation, a system for automated discovery and control of electronic devices, an optimized system for high speed transportation, a system for automated virus removal, a system for automated brain cancer surgery, and a system for an interplanetary space vehicle launch network.
